Netumo is a powerful domain and website/host monitoring solution which enables website owners to make it easier for them to monitor and manage domains and websites.

Multiple domains can be nightmare to manage. Netumo offers a central location where all websites & domains can be monitored.

## Reports

Netumo comes with multiple reports for you to easily identify and troubleshoot any issues.

## Netumo Domain checker

Netumo has built a domain checking engine to check your domains and make sure that you are notified when they are about to expire. Domain records are intelligently parsed by our intelligent engine so that you are notified prior any expiration dates such that you can take action and renew.

## Netumo Web Engine

Netumo pings your website or host depending on the frequency you specify and checks that the page is correct.

Netumo has a powerful web engine which can simultaneously check for thousands of sites ensuring that their response time is adequate. Any errors are immediately flagged to you.

## Tools

Netumo has various web tools to help the website administrator such as WHOIS lookup, NSLookup, Locating country of origin of an IP Address, Website Speed Test all accessible from the console.
